Work Experience

App Engineer | Egen, Hyderabad

April 2026 – Present

- Delivered SowCraft Agent, an AI automation tool transforming SOW document creation for sales teams by processing client meeting notes (text/Drive uploads) and auto-populating templates via Google Drive API integration, reducing manual effort by 60% across the organization.
- Implemented intelligent document processing pipeline featuring JSON-based gap analysis, automated template copying, context-aware content insertion, and dynamic table updates, achieving 85% accuracy in requirement identification through optimized ADK agent instructions and tooling.
- Drove technical excellence by upgrading from Gemini 2.5 Flash to Pro for enhanced efficiency, architecting scalable web application infrastructure on GCP, and establishing comprehensive testing protocols for production reliability.

Senior Associate App Engineer | Egen, Hyderabad

August 2024 – March 2026

- Developed backend Apis and integrated with the frontend of an **Angular-Spring Boot (Maven)** application, improving data synchronization between UI and server by 30%, leveraging technologies like RESTful APIs and Spring Boot.
- Implemented **Identity-Aware Proxy** to enhance application security by controlling access based on user identity, supported in upgrading **Angular** application from version 9 to 16 resolving issues, improving application performance and compatibility with dependencies.
- Implemented **ArcGIS** and **DeckGL** to render species movements on maps in the Wildlife Tracker application, enhancing the core functionality by 40% through high-performance geospatial visualizations using **JavaScript** libraries.
- Set up a continuous integration and continuous deployment CI/CD pipeline using Cloud Build, reducing deployment times by 40%.

Associate App Engineer | Egen, Hyderabad

July 2022 – July 2024

- Upgraded **Java** application from version 8 to 21, improving application performance and compatibility by 25% through modernized **JVM** and API optimizations, enhancing the Spring Boot framework integration.
- Managed cloud deployment of the **Angular-Spring Boot** application, reducing downtime by 20% using **Docker** and **Cloud Run**, ensuring seamless application updates and environment consistency.
- Created **webhooks** to integrate Dialogflow CX with **ServiceNow**, streamlining ticket creation and updates by 35%, with a scalable backend using **python**, **google cloud** and **RESTful** services.
- Integrated Google Maps API into the HCA AskMary chatbot, adding location-based functionalities and increasing engagement by 25%, utilizing Google Maps API with **Java** for enhanced interactivity.
- Utilized Discovery Engine Search API and integrated it with ServiceNow, providing dynamic access to knowledge bases and catalogs, improving search response accuracy by 30% through **Python**, **Google cloud APIs**.

Software Engineer Intern | Egen, Hyderabad

January 2022 – June 2022

- Developed a multilingual chatbot using **Python**, and **Dialogflow**, handling driver and vehicle services across four languages, increasing user engagement by 25% through improved accessibility and real-time API integrations.
- Enhanced testing efficiency by 30% through the automation of test case generation and execution using Python and **Botium scripts**, ensuring reliable interactions across all chatbot language versions, integrating continuous testing pipelines.
- Resolved 100% of service tickets in the VDH - VAXMax web application by addressing **Angular**, **Python**, and **PostgreSQL** component issues, ensuring seamless vaccine management, supported by robust backend optimizations during the pandemic.

Software Engineer Intern | Centre of Excellence in Wireless Technology, Chennai

May 2021 – July 2021

- Engineered a QoS enforcement module using **C++**, enhancing the system's ability to manage network traffic and maintain service quality in a 5G environment. Acquired in-depth knowledge of 5G technology architecture, procedure call flows, and **QoS** models.

Technical Skills

Frameworks: Flask, FastAPI, Spring Boot, Angular

Cloud & Databases: Google Cloud Resources, SQL, MySQL, Firestore

Infra & DevOps: CI/CD, Git, Firebase, ServiceNow

Languages & Tools: Python, Java, TypeScript, ADK, C, C++, CSS, HTML, Postman

Education

Bachelor of Technology, Electronics & Communication Engineering

August 2018 – May 2022

Indian Institute of Information Technology, Sri City

GPA: 8.92/10

Projects

Stress Classification and Vital Signs Forecasting | ML, Python, Firestore | [IEEE](#) **October 2021 - March 2022**

- Developed an IoT-based health monitoring system integrating sensor data, analytics, and machine learning to continuously track patient vitals, enhancing real-time healthcare monitoring and improving patient outcomes.
- Achieved 94.3% accuracy in stress classification using a hypertuned random forest algorithm, while forecasting critical health metrics like pulse and SpO2 using neural network models, ensuring proactive healthcare decisions.

Certifications

Google Cloud Certified - Professional Cloud Developer | [Link](#)

Google Cloud Certified - Professional Data Engineer | [Link](#)

Google Cloud Certified - Generative AI Leader Certification | [Link](#)
